

Spherity GmbH – Emil-Figge St. 80 – 44227 Dortmund

## Letter of Endorsement

Name of the Endorser: Carsten Stöcker, CEO Spherity GmbH

Dortmund, 13<sup>th</sup> May 2021

### Endorsement of the statement of ESSIC Consortium

To Whom it May Concern,

This is a formal endorsement regarding the statement and the project of the European Self-Sovereign Identity Consortium (ESSIC). We at Spherity align with the given concept and principles of ESSIC and endorse their intentions.

Spherity GmbH is working on decentralized identity, trust and provenance solutions for Business-2-Business and Business-2-Government use cases.

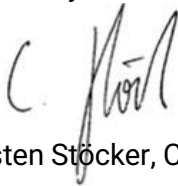

By following W3C DID/VC standards for the ESSIC network-of-network approach, any two value chain actors that rely on their respective infrastructures have the tooling to establish trust across their cross-domain/-border business processes and across their multiple cloud-based infrastructures.

On such a platform all enterprises, materials and products can have an end-to-end verifiable digital passport to establish verifiable information and end-to-end provenance tooling for origin, quality, safety, ethics, and environmental transparency of supply chain transactions and trade items.

These solutions must be ledger agnostic while focusing on end-to-end identity value chains. As value chain actors in different ecosystems might want to use multiple ledgers to anchor their decentralized identifiers a network-of-network approach will be both, beneficial and required for the digital identity industry.

We are very much looking forward to collaborating with the ESSIC project.

Yours truly,

Carsten Stöcker, CEO Spherity GmbH
